

Accelerate your F&A processes with RPA

Robotic Process Automation (RPA) helps you speed up operations, drive down costs, and increase overall productivity. With RPA, software robots handle the mundane, time-consuming tasks in Finance & Accounting (F&A) so human workers can focus on higher value work.

Automate to stay ahead

59% of Finance & Accounting leaders believe RPA will make their business more competitive over the next two years.1

See what your robots can do

Robots read and extract key information from invoices,

then add that information into your ERP system.

Optimize accounts receivable with robots that

Cash application

auto-capture and read remittance info from checks, emails, and web portals, and match payments with open invoices.

RPA handles pre- and post- payment validation and

Payment processing

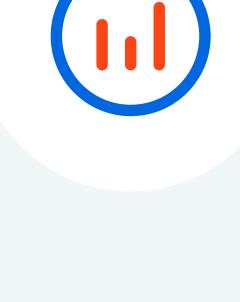

reconciliation, exception notifications, and duplicate payment identification.

Quickly process customer forms, aggregate invoice data, and trigger invoices on sales order and goods

Customer onboarding and invoicing

receipt with RPA.

Robots reliably collect, validate, and reconcile bookkeeping data, handle complex journal entries for

Record to report

SAP systems, validate tax activities, and build reports for financial systems.

processing time per transaction on average by 60%." —Divyang Patel, **Automation Solution Architect, LTI**

"We are automating customer acquisition,

processes. Till now, we have seen 200%

ROI in a year. We also reduced average

invoice validation, and other finance

without extending overtime or hiring extra staff." -Robert Gilhooly, **Director of the Financial Shared Service** Center, EDF Energy

"We estimate that the new automated process will

peak workload. It also frees up time within the

team and means that we can handle month's end

save us £50,000 each year through the reduction of

digital transformation By automating common processes with RPA, you gain time and increased value

RPA is the first step to

Finance & Accounting

from employees who would otherwise be occupied with mindless monotony. It's more than automation, it's transformation. Discover how RPA is transforming
